Implement Phase 08 only, following `AGENTS.md`, `PROJECT_CONTEXT.md`, `PHASES.md`, and `phases/08-angular.md`.\
Review the existing repository, explain your implementation plan, and ask any blocking questions before coding.\
Complete the phase's acceptance criteria, run available tests, update `IMPLEMENTATION_STATUS.md`, and stop for my explicit validation. Do not implement any subsequent phases.

Assistant – 2026-10-31T13:37:59.148Z

I'll review the repository and Phase 08 requirements, then explain the plan and raise any blocking questions before coding. I'll keep the work within Phase 08 and stop for your validation once the checks and status update are complete.

Assistant – 2026-10-31T13:38:28.228Z

Phase 07 is explicitly approved, and the worktree is clean. The backend already provides cookie login, CSRF tokens, independent preference APIs, and admin operations. The frontend is an empty placeholder.

My plan is to:

- Build a small Angular 22 app with login, personal settings, and a separate admin route.
- Use the existing APIs and fetch CSRF tokens for mutations. Show disabled items and accessible success/error feedback.
- Add a single-origin Compose frontend proxy and a local development proxy.
- Add focused frontend unit tests, run frontend and backend checks, and document manual acceptance steps.

Node 18 is installed, so I'll use a workspace-local supported Node version; Angular's compatibility table (https://angular.dev/reference/versions) requires a newer runtime. No blocking product questions have emerged.

Assistant – 2026-10-31T13:41:36.613Z

The frontend toolchain is available locally: verified Node 24.22.2 and Angular CLI 22.2.5. I'm wiring the screens to the existing APIs. Preferences will save per checkbox, with feedback and rollback on failure; deletion will require explicit confirmation.

Assistant – 2026-10-31T13:44:01.793Z

The production frontend build passes, and all 22 frontend unit tests pass. They cover independent choices, disabled items, failed writes, CSRF handling, role-based navigation, and deletion confirmation. The backend build also passes; its full test suite is running.

Next I'll check the Compose proxy and browser flow in an isolated development stack. I'm using the computer-use skill for the browser check.

Assistant – 2026-10-31T13:45:37.258Z

The isolated Compose stack built and reached healthy status, including the frontend proxy. Computer Use stopped because it could not determine the current browser URL confidently enough to enforce its policy, so I cannot claim browser validation. I'll finish the HTTP checks and

document the browser acceptance steps for your review.

Assistant – 2026-10-31T13:48:22.914Z

All 156 backend tests pass, as do the backend format check and 26 frontend tests. The final frontend build and format check also pass.

HTTP checks through the frontend origin have verified cookie login, CSRF rejection, and admin access restrictions. I'm finishing the local delivery checks for both channels, Slack removal, and global channel disablement, then updating the validation guide and status log. Browser validation remains pending.

Assistant – 2026-10-31T13:52:07.177Z

The local delivery checks passed: one event reached Email and the Slack mock; after Slack removal, the next reached Email only; after global Email disablement, the next produced neither. Deletion also invalidated the disposable user's session.

The validation guide and status log now mark Phase 08 **AWAITING HUMAN VALIDATION**, with browser checks clearly pending. I'm stopping the isolated test services and checking the final diff. No Phase 09 work was started.

Assistant – 2026-10-31T13:52:15.234Z

Phase 08 is implemented and marked **AWAITING HUMAN VALIDATION**.

- Added Angular login/logout, independent topic/channel choices, admin controls, and same-origin Compose integration.

- Passed: 26 frontend tests, 156 backend tests, builds, formatting, and Git whitespace checks.

- Local Compose/HTTP checks verified delivery changes, global suppression, CSRF, authorization, and deletion.

Browser validation remains pending: Computer Use stopped because it could not confidently identify the browser URL.

See validation steps [local file not included] and the updated status log [local file not included].

Please validate Phase 08 and provide explicit approval or corrections. Phase 09 has not started.
