Implement Phase 02 only, following `AGENTS.md`, `PROJECT_CONTEXT.md`, `PHASES.md`, and `phases/02-data.md`.\
Review the existing repository, explain your implementation plan, and ask any blocking questions before coding.\
Complete the phase's acceptance criteria, run available tests, update `IMPLEMENTATION_STATUS.md`, and stop for my explicit validation. Do not implement any subsequent phases.

Assistant – 2026-10-31T11:36:00.543Z

I'll review the repository and Phase 02 requirements, then explain the implementation plan and raise any blocking questions before coding. I'll keep the work scoped to Phase 02 and stop for your validation after verification and the status update.

Assistant – 2026-10-31T11:36:21.105Z

Phase 01 is recorded as approved, and the working tree is clean. The repository already has PostgreSQL-backed Identity, `ApplicationUser.IsEnabled`, authentication tests, and an initial migration.

My Phase 02 plan is to:

1. Extend the existing EF context with topics, channels, independent user selections, events, and deliveries.
2. Add unique constraints, foreign keys, delivery attempt limits, and repeatable Finance/Politics/Weather and Email/Slack seed data.
3. Add application-level selection operations and focused unit tests, without management endpoints or routing.
4. Generate the migration, verify fresh/repeated application where feasible, and run build, tests, and formatting.
5. Document schema/manual validation and mark Phase 02 `AWAITING HUMAN VALIDATION` in `IMPLEMENTATION_STATUS.md`, then stop.

One blocking decision remains: **user deletion and delivery history**. I recommend hard-deleting the account and cascading its personal selections and delivery records, while retaining shared events, topics, and channels. This is simple and preserves referential integrity, but removes that user's delivery history.

Do you approve that policy, or should delivery history survive account deletion?

No files have changed. I'm pausing because Phase 02 [blocked invalid-link] explicitly requires: "Resolve user deletion semantics ... do not choose silently."

User – 2026-10-31T11:37:10.385Z

The plan and the user deletion policy is approved, proceed with the implementation

Assistant – 2026-10-31T11:37:13.434Z

I'll use the approved hard-delete policy: deleting a user will cascade their selections and deliveries, while retaining shared events, topics, and channels. I'll now implement Phase 02 and its tests.

Assistant – 2026-10-31T11:38:40.348Z

The models and selection operations are in place. Topic and channel choices remain independent, and user deletion is configured to cascade only the user's selections and deliveries. The build passes. Next I'll generate the migration and check PostgreSQL behavior; Docker access is restricted in this sandbox, so that validation needs an elevated command.

Assistant – 2026-10-31T11:40:51.686Z

All 17 automated tests pass, including the existing authentication suite. Both migrations applied to fresh PostgreSQL, and rerunning them made no changes. The PostgreSQL checks also passed for duplicate prevention, foreign keys, attempt limits, independent selections, and the approved deletion policy. I'm finishing the validation guide and final checks.

Assistant – 2026-10-31T11:43:10.322Z

The final build, all 17 tests, and formatting verification pass. User and admin login also worked against the migrated PostgreSQL database, with the expected admin access checks. The temporary host and database are stopped and the temporary connection file is removed. I'm recording the handoff as awaiting your validation; no later-phase work has been added.

Assistant – 2026-10-31T11:43:48.727Z

Phase 02 is complete and marked **AWAITING HUMAN VALIDATION**.

Implemented domain models, independent topic/channel selection operations, catalog seeds, database constraints, migrations, and the approved user-deletion cascades.

Verification passed:

- Build: zero warnings/errors.
- Tests: 17 passed.
- Formatting and Git whitespace checks passed.
- Fresh/repeated PostgreSQL migrations and relational checks passed.
- User/admin authentication passed against the migrated database.

Changed-file details and evidence are in IMPLEMENTATION_STATUS.md [local file not included]. Exact manual commands are in Phase 02 validation [local file not included].

No scope deviations or blocking questions remain. Phase 03 has not started. Please validate Phase 02 and provide explicit approval or feedback.

User – 2026-10-31T11:48:12.557Z

Seperate the PersistenceModels into their own files for readbility, this includes moving enums out to their seperate place as well.

Assistant – 2026-10-31T11:48:16.279Z

I'll split each persistence model and the delivery status enum into separate files, then verify the build and tests and update the Phase 02 status record.

Assistant – 2026-10-31T11:49:20.176Z

Split `PersistenceModels.cs` into six model files and a standalone `DeliveryStatus.cs`. Behavior and schema are unchanged.

Build, all 17 tests, formatting, and EF model checks pass. Updated `IMPLEMENTATION_STATUS.md`; Phase 02 remains awaiting your explicit validation.

User – 2026-10-31T11:52:26.865Z

The phase manual testing is done and approved, update the status files

Assistant – 2026-10-31T11:52:29.712Z

I'll record your manual-test approval in the status documents and leave Phase 03 awaiting explicit instructions.

Assistant – 2026-10-31T11:52:47.457Z

Recorded Phase 02 as **APPROVED** in `IMPLEMENTATION_STATUS.md`, `README.md`, and the Phase 02 guide, including your manual-test confirmation.

Whitespace check passed. Phase 03 remains unstarted, awaiting explicit instructions.
