Implement Phase 06 only, following `AGENTS.md`, `PROJECT_CONTEXT.md`, `PHASES.md`, and `phases/04-source-worker.md`.\
Review the existing repository, explain your implementation plan, and ask any blocking questions before coding.\
Complete the phase's acceptance criteria, run available tests, update `IMPLEMENTATION_STATUS.md`, and stop for my explicit validation. Do not implement any subsequent phases.

Assistant – 2026-10-31T12:51:20.164Z

I'll review the repository and phase instructions, then explain the implementation plan and raise any blocking questions before coding.

Assistant – 2026-10-31T12:51:48.117Z

Phase 05 is recorded as human-approved, and the working tree is clean. The requested `phases/04-source-worker.md` does not exist; Phase 06 is defined in 06-source-worker.md [local file not included].

The repository already has the dispatcher, database uniqueness protection, bounded delivery retries, and Email/Slack adapters. My Phase 06 plan is to:

1. Add a typed HTTP news client and validate each item against the existing topic catalog.
2. Add one sequential, cancellable polling worker with configurable interval/timeout and safe failure logging.
3. Supply deterministic mock fixtures covering two topics, duplicate IDs, malformed items, and unknown topics.
4. Test normalization, repeat polling, source failures, and shutdown; run build, tests, formatting, and feasible Compose checks.
5. Document manual validation and mark `IMPLEMENTATION_STATUS.md` as `AWAITING HUMAN VALIDATION`, then stop.

Two decisions block coding:

- **REST contract:** Approve a `GET` returning this JSON array? `id` is globally unique; `topic` matches an existing lowercase topic code; `timestamp` means event occurrence time, requires an explicit timezone, and is normalized to UTC. Invalid items are skipped individually; repeated IDs retain the first stored event.

```json
[
  {
    "id": "mock-finance-001",
    "topic": "finance",
    "title": "Finance update",
    "body": "Sample content.",
    "timestamp": "2026-10-31T12:00:00Z"
  }
]
```

- **Mock hosting:** Choose a **Development-only API route** serving a replaceable fixture file (recommended for minimal setup), or a **separate lightweight Compose container**

serving that fixture.

These approvals are explicitly required by AGENTS.md [local file not included] and the Phase 06 specification before implementing the source contract and hosting choice. No files have been changed.

User – 2026-10-31T12:54:23.702Z

Rest contract: approved
Mock hosting: a seperate API route in the same project is perfect, make sure its dev only.

Assistant – 2026-10-31T12:54:26.844Z

I'll add the approved contract and a Development-only mock route backed by a replaceable fixture file. Then I'll wire polling to the existing dispatcher, add focused tests, and document validation.

Assistant – 2026-10-31T12:55:23.913Z

The client, worker, and mock route are in place. Each poll uses a fresh dependency scope, and cycles run sequentially through the existing dispatcher. The route rereads its fixture on every request, so fixture changes take effect without restarting; removing the file produces HTTP 503 for failure validation. I'm adding tests for repeat ingestion, malformed items, shutdown, and the Development-only route restriction.

Assistant – 2026-10-31T12:57:18.834Z

The build passes. One new test needed its exception assertion corrected because malformed JSON throws a subclass of `JsonException`. Docker is accessible after an elevated check, so I can also validate the Compose startup. I'm adding a controlled test that runs the worker through the HTTP client, dispatcher, and both adapters using fake transports.

Assistant – 2026-10-31T12:59:36.898Z

All 103 tests pass. The isolated Compose stack also started successfully: automatic polling stored the two valid events and sent two Emails through MailKit to Mailpit, each in one attempt. The controlled test passed through both Email and Slack adapters. I'm checking live repolling, HTTP failure recovery, and shutdown before finishing the handoff documentation.

Assistant – 2026-10-31T13:01:07.903Z

Live validation passed: repolling kept the database at two events and two total send attempts. Removing the fixture returned HTTP 503 and logged source failures; restoring it resumed successful polls without extra deliveries. Shutdown logged `News polling stopped`. The temporary stack is now stopped with its test data retained. I'm finishing the status log and final checks; Phase 07 remains untouched.

Assistant – 2026-10-31T13:02:28.027Z

Phase 06 is complete and **AWAITING HUMAN VALIDATION**.

Implemented configurable HTTP polling, payload validation, duplicate suppression, and a Development-only `/dev/mock-news` route with replaceable fixtures.

Validation passed:

- Build: zero warnings/errors.
- Tests: **103 passed**.
- Formatting and Git whitespace checks.
- Live Compose: two events, two successful Emails, no duplicates on repoll, HTTP 503 recovery, and clean shutdown.
- Both adapters verified with fake transports; live Slack was not exercised.

Changed files and evidence are recorded in IMPLEMENTATION_STATUS.md [local file not included]. Follow the validation guide [local file not included] for exact manual commands.

No blocking questions remain. Phase 07 was not started, and no commit was created.

Please explicitly approve Phase 06 or request corrections.

User – 2026-10-31T13:05:50.473Z

phase 06 manual test is approved

Assistant – 2026-10-31T13:05:54.097Z

I'll record your Phase 06 approval in the status log and README. Phase 07 will remain unstarted.

Assistant – 2026-10-31T13:06:13.917Z

Recorded Phase 06 as **APPROVED** in the status log, README, and validation guide. Documentation-only changes; whitespace check passed.

Phase 07 remains unstarted pending your explicit request.
