Implement Phase 00 only, following `AGENTS.md`, `PROJECT_CONTEXT.md`, `PHASES.md`, and `phases/00-skeleton.md`.
Review the existing repository, explain your implementation plan, and ask any blocking questions before coding.
Complete the phase's acceptance criteria, run available tests, update `IMPLEMENTATION_STATUS.md`, and stop for my explicit validation. Do not implement any subsequent phases.

Assistant – 2026-10-31T10:24:46.999Z

I'll review the repository and Phase 00 requirements, then explain the implementation plan and flag any blocking questions before coding. I'll keep changes limited to Phase 00 and stop for your validation once its checks and status update are complete.

Assistant – 2026-10-31T10:25:18.681Z

The repository contains planning documents and the earlier conversation, but no application code or solution. The working tree is clean. Installed tooling includes .NET SDK 10.0.403 and Node.js 18.14.2.

My proposed Phase 00 layout is:

```
Sonrisa/
├── Alerts.sln
├── src/Alerts.Api/
│   ├── Domain/
│   ├── Application/
│   └── Infrastructure/
├── tests/Alerts.UnitTests/
├── frontend/.gitkeep
├── README.md
├── .gitignore
├── .env.example
└── codex_alerts_plan/     # Existing requirements and status
```

One backend project with separate folders keeps the modular monolith small. I'll document domain vocabulary and minimal source, sender, and routing contracts; add a minimal host and smoke test; run build/tests; and update the existing status log to `AWAITING HUMAN VALIDATION`.

Three decisions block coding:

1. **Database:** SQL Server, PostgreSQL, or another provider?
2. **Versions:** Do you approve **.NET 10 LTS and Angular 22**? These are supported versions per the official .NET policy (https://dotnet.microsoft.com/en-us/platform/support/policy/dotnet-core) and Angular compatibility table (https://angular.dev/reference/versions). Angular remains a placeholder in Phase 00; installed Node 18 will need upgrading before Phase 08.
3. **Root and layout:** Confirm `D:\Temp\Sonrisa` as the application root and approve the layout above, keeping requirements in `codex_alerts_plan/`.

No files have been changed. I'm pausing because the repository instructions explicitly require these decisions before implementation.

User – 2026-10-31T10:27:46.815Z

Database: PostgresSQL

Versions: .NET 10 LTS and Angular22 are good, remind me of the node update at the appropriate time if you cannot handle it on your own
Layout: Acceptable

Assistant – 2026-10-31T10:27:50.810Z

I'll use PostgreSQL, .NET 10 LTS, and the approved layout, and record Angular 22's Node upgrade requirement for Phase 08. I'll now build the Phase 00 skeleton, run the available checks, and prepare the validation handoff.

Assistant – 2026-10-31T10:29:30.066Z

The skeleton is in place. The host has no product endpoints, and the domain vocabulary and contracts are documented without fixing future schema or integration details.

The first restore failed because the sandbox blocked NuGet network access. I'll retry with network permission, then run the build, tests, formatting check, and a local host startup check.

Assistant – 2026-10-31T10:30:17.975Z

Build, tests, and formatting checks passed. The host also started successfully and returned HTTP 404 at `/`, as expected for an empty host. It has been stopped.

I'm updating the handoff log with those results, the manual validation commands, and the agreed choices. Phase 00 will remain `AWAITING HUMAN VALIDATION`.

Assistant – 2026-10-31T10:30:53.442Z

Phase 00 is complete and **AWAITING HUMAN VALIDATION**.

Created the solution, minimal API host, documented Domain/Application/Infrastructure boundaries and contracts, unit-test project, Angular placeholder, example configuration, and build instructions. PostgreSQL and version decisions are recorded.

Validation passed:

- Build: zero warnings/errors.
- Tests: 1 passed.
- Formatting check: passed.
- Host startup: expected HTTP 404 at `/`.
- NuGet restore succeeded after a network-permission retry.

See README.md [local file not included] for the repository tree and verification commands, and IMPLEMENTATION_STATUS.md [local file not included] for full evidence and limitations. The Node upgrade reminder is recorded for Phase 08.

Please validate Phase 00 and explicitly approve it or request corrections. No subsequent phases were implemented.

User – 2026-10-31T10:46:17.224Z

phase 00 is valid, update the implementation status to validated and wait further instructions before starting phase 01

Assistant – 2026-10-31T10:46:20.310Z

I'll record your Phase 00 validation in the status log and leave Phase 01 untouched.

Assistant – 2026-10-31T10:46:31.661Z

Updated IMPLEMENTATION_STATUS.md [local file not included] to **APPROVED – human validated**, recording your explicit approval.

Phase 01 remains unstarted. Awaiting your instructions.
